

Greeting AGMers,

Precipitation is **0.04"** for September and **12.33"** year-to-date.

Highlights of Happenings:

- **Cowboys report** steers are fat and happy in Saltflat, in this heat there will usually be some at water of course, but they are traversing the whole pasture from the saltflats to the uplands very well.
- **New rotation plans:** Last 10 days spent in Ridgeline, I highly suspect they'll make it in Saltflat to the 21-day trigger so they should move to **Ridgeline** on **September 20th**.
- **Saltflat VOR is 1217.3 pounds/acre or 5.19 cm.**
