STATE AGRICULTURAL EXPERIMENT STATIONS

**COMPARISON OF
WINTER WHEAT VARIETIES GROWN IN COOPERATIVE
NURSERY EXPERIMENTS IN THE
HARD RED WINTER WHEAT REGION
IN 1990**

**C. J. Peterson
Research Agronomist**

This is a joint progress report of cooperative investigations under way in the State Agricultural Experiment Stations and the Agricultural Research Service of the U. S. Department of Agriculture containing preliminary data which have not been sufficiently confirmed to justify general release. Interpretations may be modified with additional experimentation. Confirmed results will be published through established channels. The report is primarily a tool for use of cooperators and their official staffs and for those persons having direct and special interest in the development of agricultural research programs.

The report includes data furnished by the State Agricultural Experiment Stations as well as by the Agricultural Research Service and was compiled in the Northern Plains Area, U. S. Department of Agriculture. The report is not intended for publication and should not be referred to in literature citations nor quoted in publicity or advertising. Use of the data may be granted for certain purposes upon written request to the agency or agencies involved.

REGIONAL NOTES

The 1990 Hard Red Winter Wheat Breeders Field Day was held last May at the Kansas State University South Central Research Station at Hutchinson, KS. The 1991 Breeders Field Day is scheduled for June 27 at Ft. Collins, CO, hosted by Colorado State University in cooperation with Agripro Bioscience, and Cargill Hybrid Wheat.

The 19th Hard Red Winter Wheat Workers Conference is tentatively scheduled to be held at Lincoln, Nebraska on January 21-23, 1992.

Ted Walters, KSU Agronomist responsible for variety testing and coordination of the annual KSU Fall Cereal Conference, retired in August, 1990. Professor Walters was replaced in the position by Craig Roozeboom.

Dr. Rosalind Morris, Cytogeneticist with the University of Nebraska, retired in June, 1990. A replacement has not been named at this time.

Dr. David Shelton joined the University of Nebraska in July, 1990 as UN-L Cereal Chemist involved with wheat quality research. Dr. Shelton was previously Cereal Chemist with North Dakota State University and he replaces Professor Paul Mattern who retired in 1988.

Dr. Allan Taylor, Wheat Breeder with Montana State University, accepted a temporary two year position with the MIAC project in Morocco. Dr. Gene Hockett, formerly USDA-ARS Barley Researcher, will coordinate the Montana winter wheat program during Dr. Taylor's absence.

Dr. Grant Jackson has transferred within the Montana State University system from Moccasin to the Conrad, Montana Experiment Station. Dr. David M. Wichman will be collaborating on the NRPN trials at Moccasin.

NOTE: The response reaction of entries to leaf and stem rust infection has been coded on a 1-9 scale to facilitate generation of this report. This same scale has been used in past reports. The response data can be interpreted as follows:

| <u>Response scale</u> | | <u>Reaction type</u> |
|---------------------------|---|--------------------------|
| 1 | - | VR |
| 2 | - | R |
| 3 | - | MR |
| 4 | - | M |
| 5 | - | M |
| 6 | - | M |
| 7 | - | MS |
| 8 | - | S |
| 9 | - | VS |

NEW VARIETIES AND GERmplasm

The following is only a partial list of new wheat varieties and germplasms available in the region. Included are those for which we have current information.

VARIETIES

The Texas Agricultural Experiment Station has announced the release of the hard red winter wheat variety 'Siouxland 89'. Siouxland 89 was developed from a series of selections from the Nebraska variety Siouxland. Twenty lines resistant to races MBB and MFB of *Puccinia recondita* and 37 lines resistant to races MBB, MDB, and MCB, all of which were uniform in appearance, were combined to form Siouxland 89. Siouxland 89 is different than Siouxland in that it is more uniform for plant type and lacks the tall late plants of the original variety. Otherwise, Siouxland 89 is essentially similar to Siouxland in areas of adaptation and performance.

The Nebraska Agricultural Experiment Station and USDA-ARS announced the release of 'Rawhide' in 1990. Tested as NE83498 in the 1989 and 1990 SRPN, it is an F₃ derived line from the cross Wrr*5/Agent//Kavkaz/4/Pkr*4/Agent//Beloterkovskaya 198/Lcr/3/Vona. Rawhide is a medium height semidwarf with moderately strong straw and good winterhardiness. It averages one day earlier than Redland, Arapahoe, and Siouxland in flowering. It is moderately resistant to prevalent races of stem rust and susceptible to leaf rust, SBMV and WSMV.

Agripro Biosciences has indicated the intent to release two varieties in 1991. 'Longhorn' was tested as W188-024 and is derived from the pedigree NS2630-1/Thunderbird. It is an awnless, tall semidwarf with vigorous spring growth habit and potential as a graze-out wheat in the southern region. W188-083 is derived from the bulk population Iron Straw S4. It is a medium height semidwarf of medium maturity. With the exception of tan spot, foliar disease resistance is good. W188-083 is most easily described as an improved 'Victory'. It has been tentatively named 'Tomahawk'. Both these varieties were entered in the 1991 SRPN for further evaluation.

GERMPLASM

The USDA-ARS, Kansas Agricultural Experiment Station, and the Wheat Genetics Resources Center at KSU announced the release of KS90WGRC10 hard red winter wheat germplasm. KS90WGRC10 is derived from a single BC₂F₃ family from the cross TAM-107*3/TA2460. TA2460 is a leaf rust resistant accession of *Aegilops Squarrosa*. Seedlings of KS90WGRC10 produce a low infection type when inoculated with culture PRTUS25 of *Puccinia recondita* Rob. ex Desm. and adult plants exhibited an immune reaction to leaf rust infections at four Kansas locations in 1990. The leaf rust resistance is governed by a single dominant gene located on chromosome 1D. KS90WGRC10 is similar to TAM-107 in height, maturity, and overall phenotype.

* New Entry in 1990
 ** New Seed Provided

TEST SITE INFORMATION - SRPN

Clovis, NM — The dryland trial was planted on September 20 with good moisture at planting and in December and January. Below normal precipitation occurred from March through June. No disease problems present and plots were sprayed in April to control the Russian Wheat Aphid. Harvested on June 14.

The irrigated trial was planted on September 27 with good moisture at planting and in December and January with near normal temperatures. Plots were irrigated on 9/29/89, 2/20/90, 3/21/90, 4/17/90 and 5/24/90. No disease problems were present and plots were sprayed in April to control the Russian Wheat Aphid. Harvested on June 14.

Farmington, NM — Harvested on 7/20/90.

Bushland, TX — No information.

Chillcothe, TX — Fall moisture was very short but spring precipitation was best on record. No yield limiting diseases or insects. Fertilized with 154 lb/a of 26-32-0. Planted 11/9/89.

Dallas, TX — Planted on 10/13/89 and harvested 6/1/90. Dry fall conditions followed by wet spring. Leaf rust and powdery mildew were severe.

Prosper, TX — Planted on 10/16/89 and harvested 6/12/90.

Stillwater, OK — Seeded on 10/18/89. Wind and rainstorms during grain filling period resulted in lodging of some plots. Leaf rust and powdery mildew were present. Yields were lower than anticipated.

Lahoma, OK — Seeded on 10/12/89. Uniform stands were established for all plots. Higher than average rainfall in spring. Mild to heavy infections of leaf rust and powdery mildew were present which depressed yields to some extent.

Altus, OK — Seeded on 11/2/89. Some problems in stand establishment due to dry seedbed conditions. Above normal rainfall during grain-filling period with heavy leaf rust infections. Yields were depressed somewhat but the test had an acceptable CV.

Goodwell, OK — Seeded on 10/4/89. Generally favorable growing conditions throughout the season. No observable damage from foliar diseases.

Hutchinson, KS — Abandoned due to irregular stands.

Manhattan, KS — Good stands were obtained and the nursery looked good from emergence to harvest. Excellent moisture was available throughout the growing season. Powdery mildew and leaf rust were the primary diseases present with spotty infections of BYDV. Heat stress during the last 10 days of grain fill reduced yields and early selections generally performed better.

Hays, KS — No information.

Garden City, KS — No information.

Colby, KS — No information.

Colorado sites — Ft. Collins and Burlington sites were abandoned. No additional growing season information.

Lincoln, NE — Generally good growing conditions with minimal winterkilling. Leaf rust and powdery mildew were present. Lodging was above normal. Heads ripened before stems due to heat, making harvest difficult.

Clay Center, NE — Little winterkilling and a better than average crop. Foliar blotch diseases were the main problem in the nursery due to a wet spring. In the SRPN, a spray nozzle dripped glyphosate during plot marking, increasing the trial CV.

North Platte, NE — No winterkilling. The nursery was characterized by moisture shortage. Moisture came often enough to allow a severe leaf rust infection, but was inadequate to alleviate drought stress at finish. The nursery had very uniform drought stress and could have been harvested on July 2, 15 to 20 days before normal harvest date.

Sidney, NE — Little winterkilling. Severe heat and drought stress resulted in low yields for this location.

Allance, NE — Similar conditions to Sidney, but was saved by a late rain that allowed the crop to finish and perhaps favor later wheats. A better than average nursery for this location.

Brookings, SD — Planted 9/25/90 into fallowed ground. No snow cover throughout the winter. Winterkill was severe although the only below normal temperatures were during the first two weeks in December. The nursery was dry all season with a late infection of stem rust. Harvested on July 23.

Presho, SD — The nursery was abandoned due to hail.

Highmore, SD — Planted on 9/25/89 into fallowed ground. No winterkill occurred and the nursery had good moisture throughout the year. Leaf and stem rust were present. Harvested on July 18.

Casselton, ND — Lost to winterkill. There was little or no snow cover most of the winter and soil temperatures were below -5 degrees F.

Columbla, MO — Planted into adequate topsoil moisture with good emergence and fall tillering. Temperatures were cooler than normal throughout much of the growing season. Rainfall throughout the growing season was well above normal (40 to 45 inches) resulting in significant infections of powdery mildew, septoria leaf and glume blotch, and scab. Harvest was severely delayed by 3-4 weeks due to heavy field moisture. Many of the plots were flat by the time harvest was possible. Yields were very poor due to the late harvest.

Crawfordsville, IA — The trial was grown in southeast Iowa rather than Ames this year. The nursery was planted September 26 in moist soil soon after soybeans were harvested. Conditions were good for survival. The winter was dry, but substantial rains occurred as spring growth resumed. Vegetative growth was excessive which caused early lodging for the test. Mildew and leaf rust were present. Harvested on July 9.

Lind, WA — Seeding moisture was marginal but adequate stands were obtained. Fall growth was slow due to poor moisture conditions. Spring weather was mild. March was dry with wetter than normal conditions in April. May and June were extremely dry and cold. Extensive mouse damage occurred in the nursery. Stripe rust notes were taken on a separate planting.

Aberdeen, ID — Cool, wet spring resulted in enhanced tillering without excessive plant height or lodging, providing for excellent yield potential.

Table 1. Yield and agronomic data for 38 wheats in the Southern Regional Performance Nursery in 1990.

* Hybrids were evaluated using F₂ seed.

Table 12b. Correlation of coleoptile length of 1990 SRPN entries from four seed sources, mean seed weight, and mean plant height over 21-locations.

| | Coleoptile length | | | | Mean | Mean weight 16 seed planted |
|--|-------------------|-------------------|----------------|---------------|-------|-----------------------------------|
| | Bushland TX | Chillicothe TX | Goodwell OK | Lincoln NE | | |
| r value - coleoptile length and weight of seed planted | -0.06 | 0.08 | 0.22 | -0.01 | -0.09 | |
| Probability > r | 0.70 | 0.62 | 0.19 | 0.97 | 0.39 | |
| r value - coleoptile length and mean plant height | 0.66 | 0.71 | 0.67 | 0.63 | 0.68 | -0.29 |
| Probability > r | <0.01 | <0.01 | <0.01 | <0.01 | <0.01 | 0.07 |

Methods used in 1990 differed from those in 1989 when seedlings were grown in flats of vermiculite. In 1990 seedlings were grown in growth pouches of tap water. Entries from a given seed source were evaluated in a separate experiment. A single plot of each entry, 16 seed planted in one growth pouch, was evaluated of each seed source. Experiments were conducted in a dark room where temperatures varied primarily from 18 to 22 degrees C.

Significant differences in both coleoptile length and seed weight were found among entry and location means using entry x location mean squares as error terms. Although a statistical test of significance of the entry x location is not possible, examination of the data suggests no meaningful entry x location interaction. A lack of a significant entry x location interaction is also suggested by the fact that r values, N = 38, for coleoptile lengths of any of the six possible paired comparisons among the four seed sources varied from .91 to .96. Although seed sources and methods in 1990 differed from those used in 1989 the correlation coefficient value for mean coleoptile length of entries evaluated in both 1989 and 1990, N = 19, was .91.

Differences in coleoptile length among entries were not associated with differences in seed weight.

TEST SITE INFORMATION - NRPN

Nebraska Stations — See information for SRPN.

Brookings, SD — Lost to winterkill.

Presho, SD — Abandoned due to hail.

Highmore, SD — See information for SRPN.

Casselton, ND — Lost to winterkill.

Carrington, ND — Lost to winterkill.

Williston, ND — Planted 9/8/89 and harvested on 7/23/90. Thirty lbs/a of N was applied.

Rosemount, MN — Seeded 9/13/89. Growing conditions were wet providing for severe mildew. Mildew prevented reading of leaf rust. Bacterial leaf blight was present and stem rust came in very late. Scab was very prevalent in the samples. Winter injury was severe in many lines.

Waseca, MN — Abandoned due to poor stands in the spring.

Sheridan, WY — Planted on 9/22/89. Soil conditions were moist and stands excellent. Seeding rate was 45 lbs/a.

Archer, WY — Planted on 9/19/89. Soil conditions were moist and stands were good, but not excellent. Seeding rate was 45 lbs/a. Hot conditions at flowering influenced yields and test weight.

Moccasin, MT — The growing area had excellent fall and spring moisture and the nursery survived the winter in excellent condition. The nursery suffered from the lack of rainfall from June 15 to July 25. A hailstorm caused about a 10% loss on July 25. The nursery was relatively disease free except for a few plants in every plot infected with dryland root rot.

Sidney, MT — Seeded into summer fallow ground on 9/14/89 and harvested 8/6/90. Precipitation for the crop year was 10.66 inches with 6.83 inches received from April 1 to July 31.

Bozeman, MT — All entries survived the winter and lodging was not as severe as in the previous year.

Idaho stations — See information for SRPN.

Lind, WA — See information for SRPN.

^aC, P, and N = complete, partial, and no staining of root tips, respectively; P- and P+ indicate light and dark intensity, respectively, of partial staining.

^bVS = very susceptible, MS = moderately susceptible, I = intermediate and T = tolerant (≤ 0.72 mM Al); * = heterogeneous response; predominant stain intensity listed first for each Al concentration.

QUALITY DATA

Composites of 1-lb samples of each SRPN and NRPN entry from each harvested nursery site are evaluated at the Hard Red Winter Wheat Quality Laboratory at Manhattan, Kansas. Results are reported to cooperators by the laboratory and are not included in this report.

UNIFORM WINTERHARDINESS NURSERIES

The nurseries are usually comprised of Southern and Northern Materials Sections. In 1990 the sections were combined into the Southern Materials Section due to lack of entries for the Northern Materials Section. The Southern Section contained 158 entries. Nursery lists and survival data from test sites at which differential winter survival occurred appear in the tabulations that follow.

SOIL-BORNE MOSAIC NURSERY

The nursery contained 90 entries in 1990 and was planted at Lincoln, NE, Manhattan, KS, and Urbana, IL. Warm and dry spring conditions did not allow sufficient expression of the disease at Lincoln and no data were obtained from Urbana, IL. Disease reaction data from Manhattan is included.
