FMD surveillance and control measures in Korea

3

NSP positive farm analysis

4

Pilot studies for interpretation of NSP reactions

# **1. Recent FMD situation in Korea**

# FMD situation and **vaccination policy** in Korea (2000-2017)

## ❖ 2000 ~ 2017 FMD outbreaks (9 outbreaks)

- 1<sup>st</sup> : Mar 2000(O/PanAsia), 15 Cattle farms, [Ring Vaccination](#)
- 2<sup>nd</sup> : May 2002(O/PanAsia), 15 Pig & 1 Cattle farms, No Vac.
- 3<sup>rd</sup> : Jan 2010(A/Sea-97), 6 Cattle & 1 Deer(AB) farms, No Vac.
- 4<sup>th</sup> : April 2010(O/Mya-98), 8 Cattle & 5 Pig farms, No Vac.
- 5<sup>th</sup> : Nov 2010(O/Mya-98), 153 cases(3,748 farms), No Vac. → [Vaccination \(2011-\)](#)
- 6<sup>th</sup> : July 2014 (O/Mya-98), 3 pig farms ([Nationwide Vaccination](#))
- 7<sup>th</sup> : Dec 2014 (O/Mya-98), 185 Cases ([Nationwide Vaccination](#))
- 8<sup>th</sup> : Jan 2016~ (O/Mya-98), 21 Cases~ ([Nationwide Vaccination](#))
- 9<sup>th</sup> and 10<sup>th</sup>: Feb 2017 (O/Ind2001d, A/sea-97), 9 Cases([Nationwide Vaccination](#))

# Comparison of culled animals in 2010 Nov. Vs 2014 Dec.

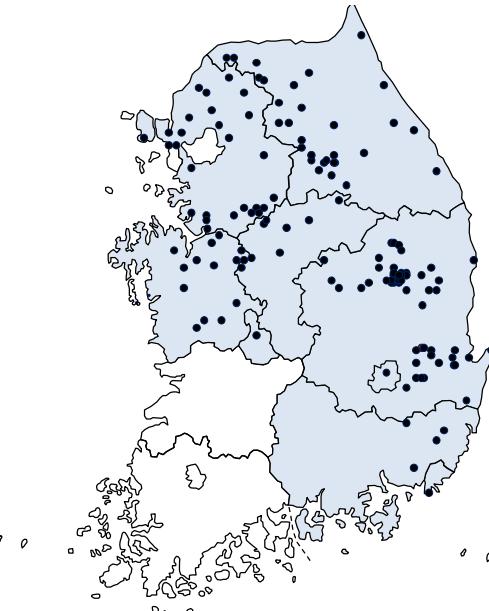

(FMD huge outbreaks in Korea)

## Two strategies

Non-Vac  
(153 cases, Index farm)

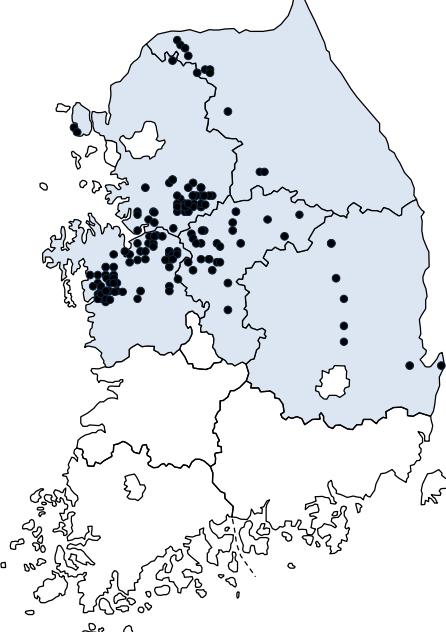

Vaccination  
(185 cases, infected farm)

Nov 2010

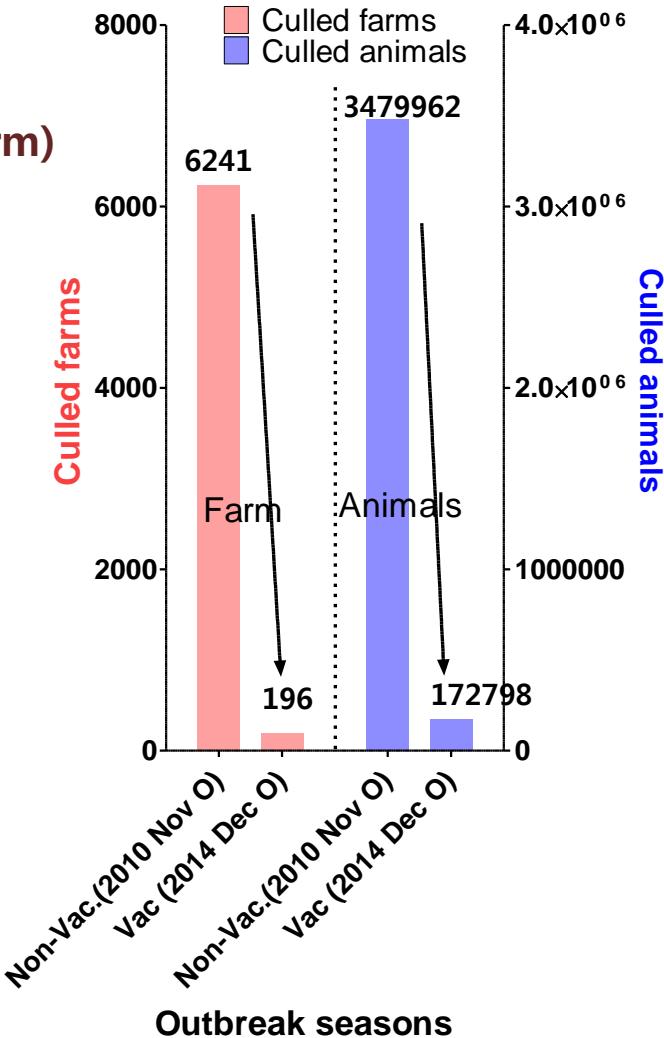

O/SEA

Dec. 2014

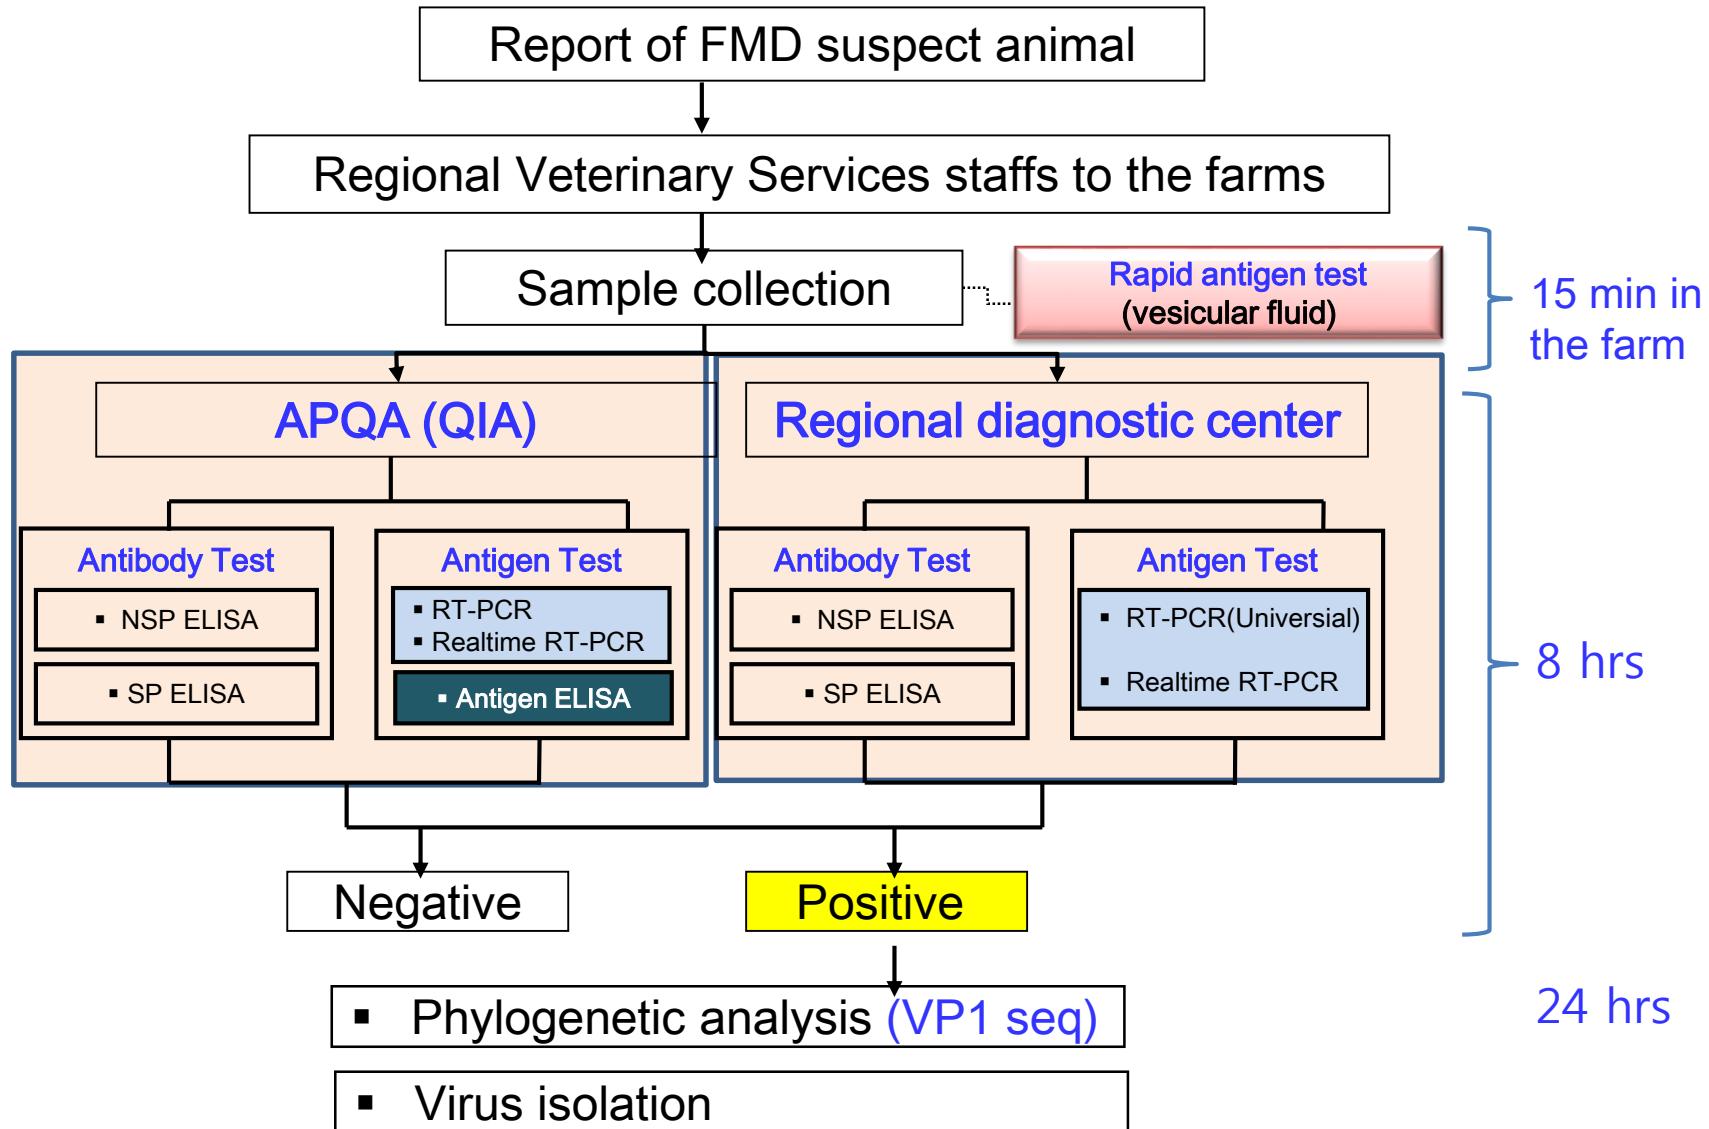

O/SEA

## **2. Serologic surveillance and Control Measures in Korea**

# Diagnosis procedures for FMD in Korea

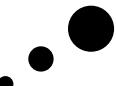

# Serological surveillance in Korea

---

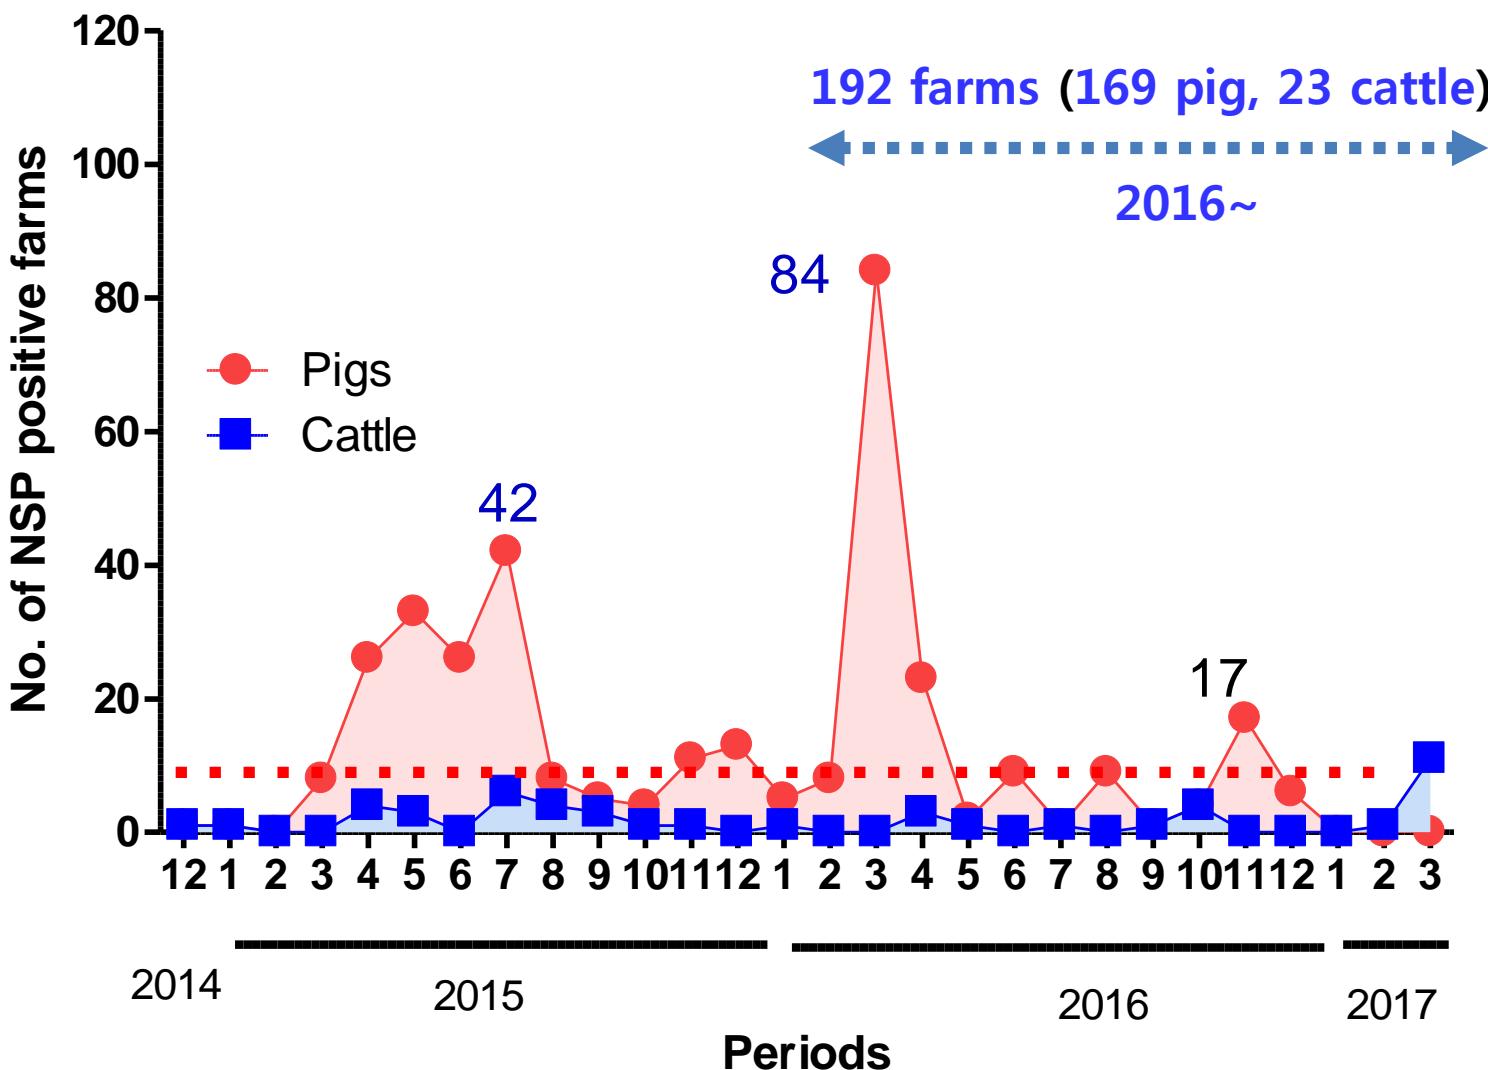

- **NSP antibody test for active surveillance**
  1. **Statistical surveillance using stratification criteria**
    - 1<sup>st</sup>: 1% morbidity, 95% diagnostic sensitivity, random
    - 2<sup>nd</sup> : 10% (goat 20%) morbidity, 95% confidence
      - cattle 5 head, goat 4 head random sampling
      - 18,182 heads in 2017
  2. **Purposive surveillance**
    - pig NSP, slaughterhouse, GGP farm, breeding stock farm, wild animal, NSP-chasing,
    - 256,038 test in 2017
- **SP antibody test for vaccine performance**
  - **cattle** (8-10% of all the cattle, 47,568 test),
  - **pigs** (2 times/farm/year, 235,303 test)

# Tested numbers by serological surveillance

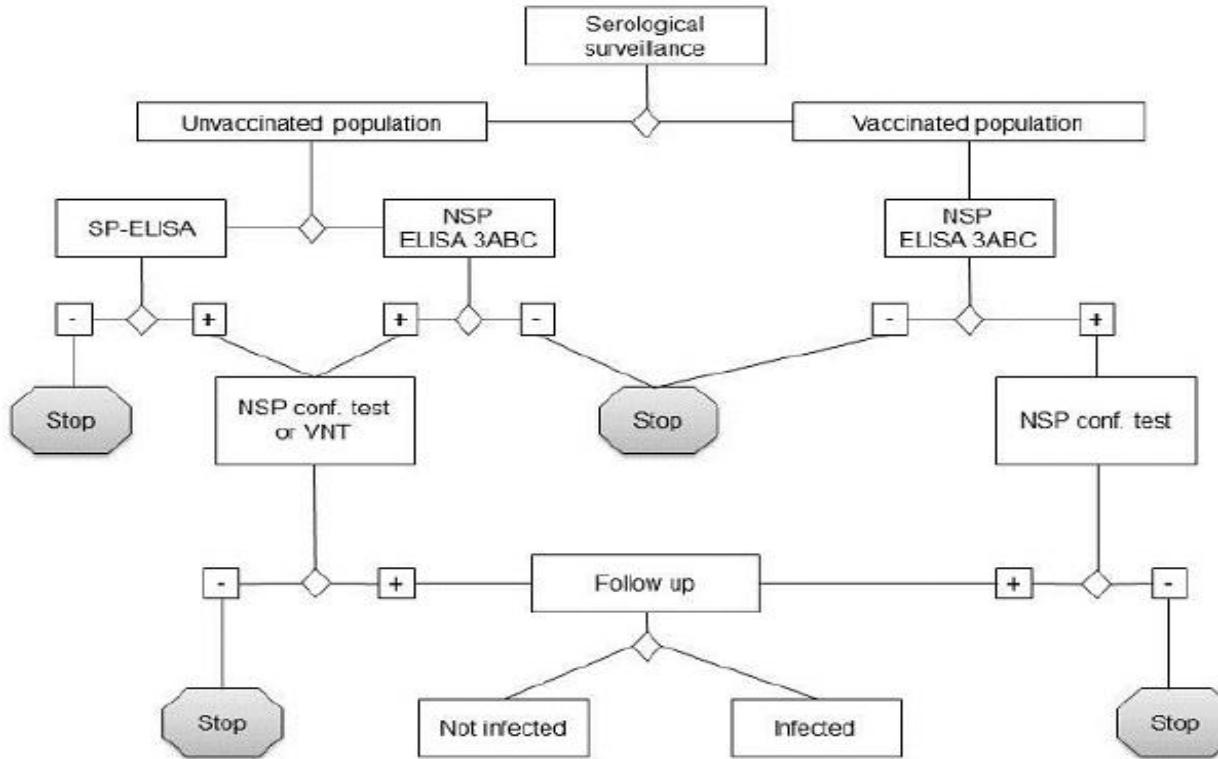

Year	Cattle		Pigs		Goat & others		Total	
	NSP	SP	NSP	SP	NSP	SP	NSP	SP
2011	81,903	15,498	12,533	65,816	3,399	3	109,934	81,317
2012	84,784	23,929	30,202	77,247	3,765	1,146	138,915	102,322
2013	47,471	20,738	15,976	84,704	3,423	1,965	84,185	107,407
2014	51,423	40,704	75,918	145,032	3,888	2,620	131,229	188,356
2015	51,543	35,692	197,930	260,870	4,062	1,892	253,535	298,454
2016	52,553	28,522	378,721	362,120	3,767	1,861	435,041	392,503

# NSP positive farms

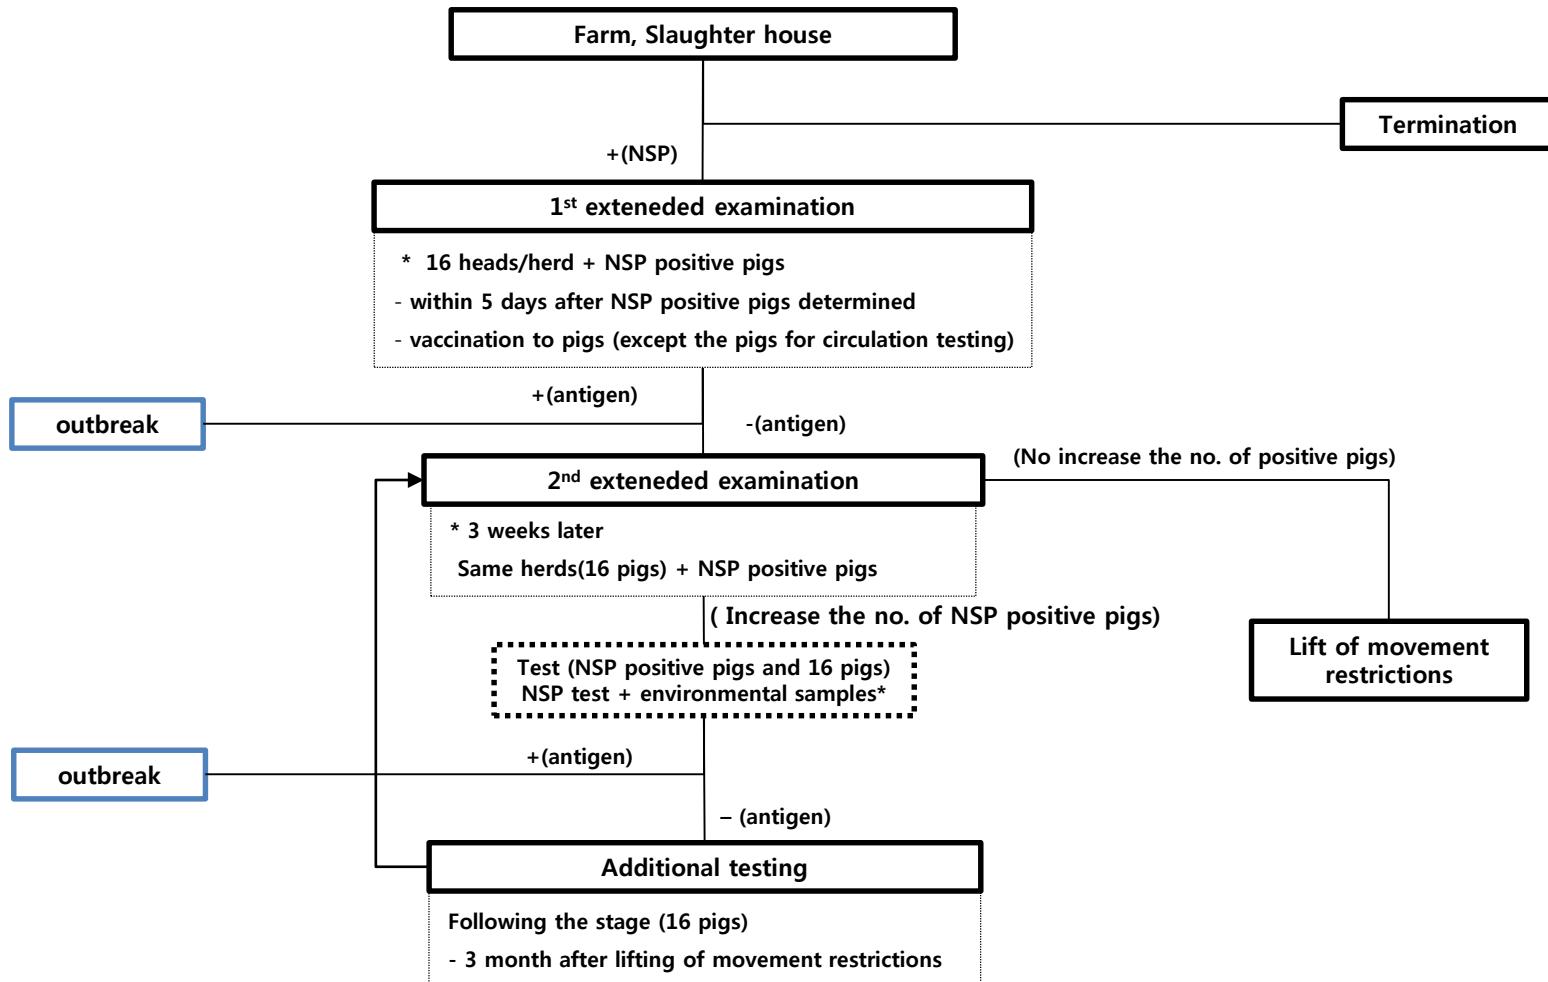

# Schematic procedures for determining evidence of infection with FMDV via serologic surveys

OIE code (8.8.42)

# Tests and Control measures in NSP positive farm by serologic surveys(Korea)

### **3. Analysis of NSP positive farms**

# NSP positive farms

(NSP positive with no clinical signs and antigen, from Jan., 2016. – Jun., 2017)

('15. 1.~'17. 6.)

Origin	No. of NSP positive farm	1st Extended exam	2nd Extended exam	3rd Extended exam	Antigen
Slaughterhouse	176	156	20(3)	0	-
Epidemiologically related outbreak farms	10	10	0	0	-
GP farm	26	11	5(2)	0	-
National surveillance	7	3	4(0)	0	-
Hong-sung area (Historically outbreak area)	110	89	21(17)	(3)*	-
Total	318	318	66	0	-

80%

( ) : increase the no. of NSP positive pigs in 2<sup>nd</sup> extended examination

\* : 3 farm( to 4<sup>th</sup>, 6<sup>th</sup>, and 4<sup>th</sup> respectively)

# Slaughterhouse

No.	Farm	Result (< 0.6)	Positive/tested( Date)	Extended Test(ET)

## 4. Pilot studies for interpretation of NSP reactions

Why FMD antigen was not detected in NSP positive pigs ?

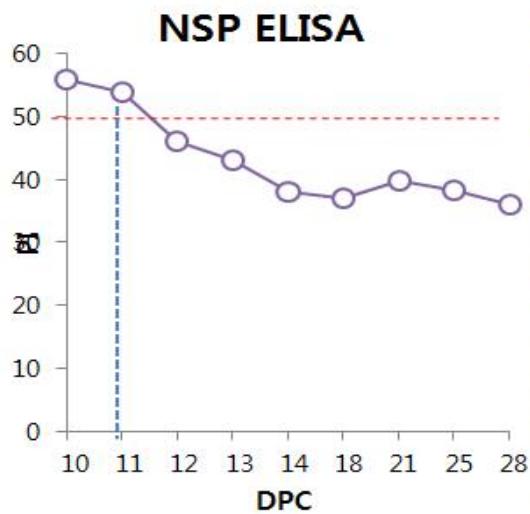

---

- Sample Transportation
- Degraded virus or NSP inducing materials ?

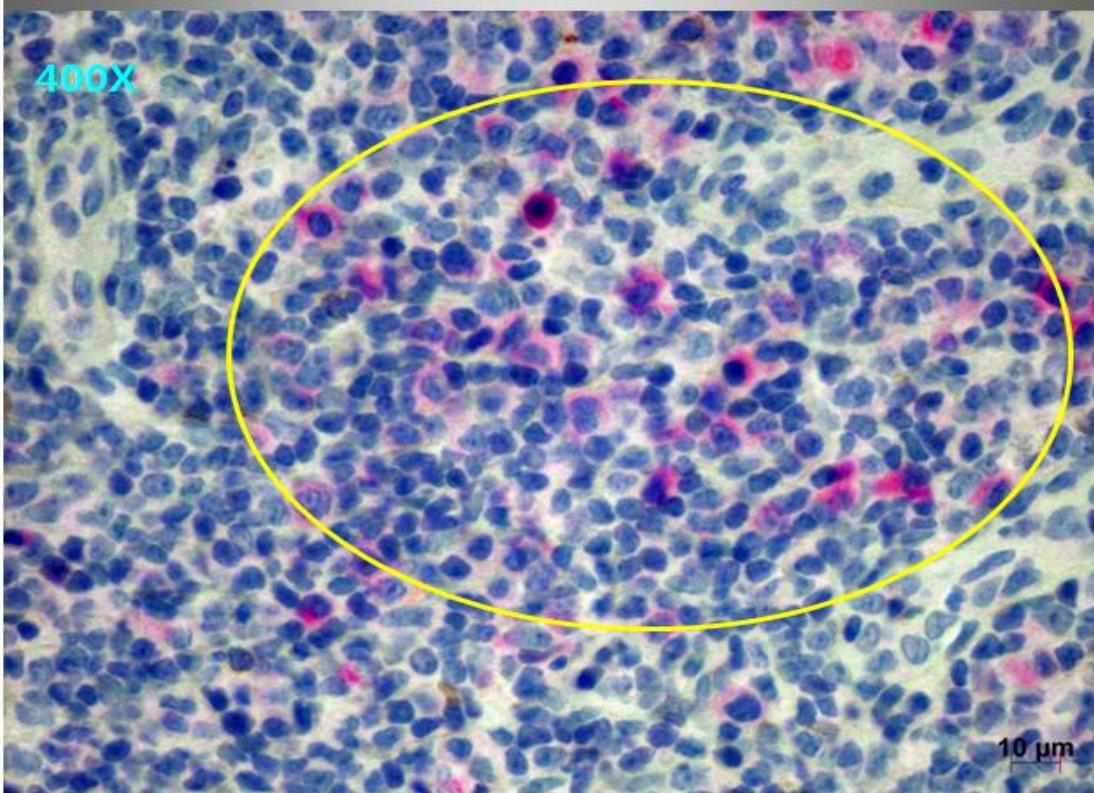

## Sample transportation

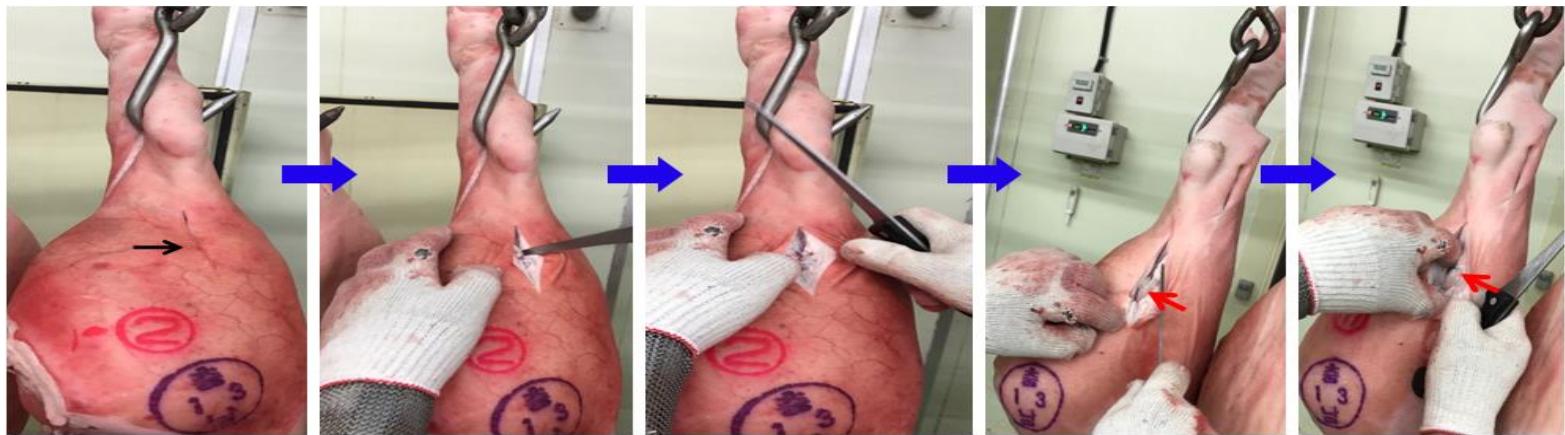

Degraded virus particle?

Donor : FMDV O/GJ/SKR/2016(No vaccine )  
Autopsy: 35dpc (NSP Ab 11일째까지만 확인)

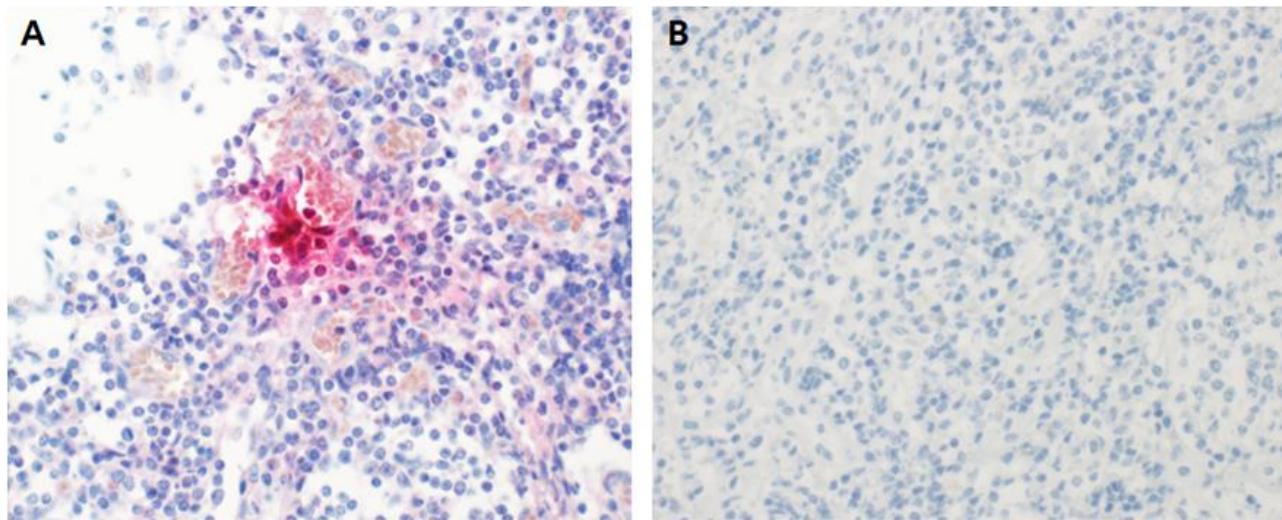

1번 : 뒷다리 흙 들어간  
부분 13Cm 정도  
세로로 칼집

2번 : 개복하자마자  
Popliteal LN  
확인 가능

3, 4, 5번 : 만져지는 Popliteal LN 꺼집어 냄

Challenged pig (LN)

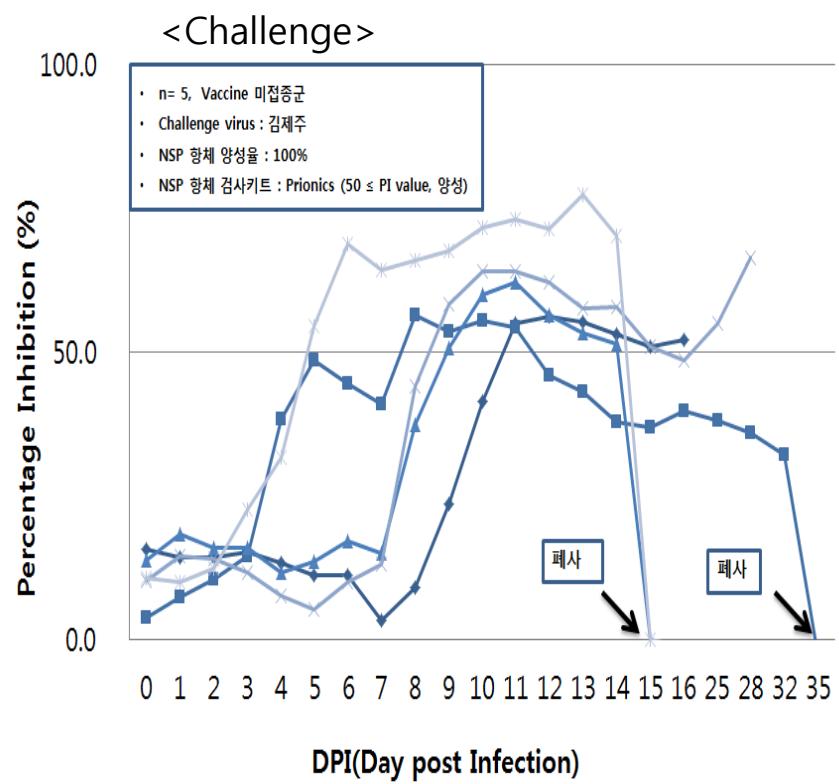

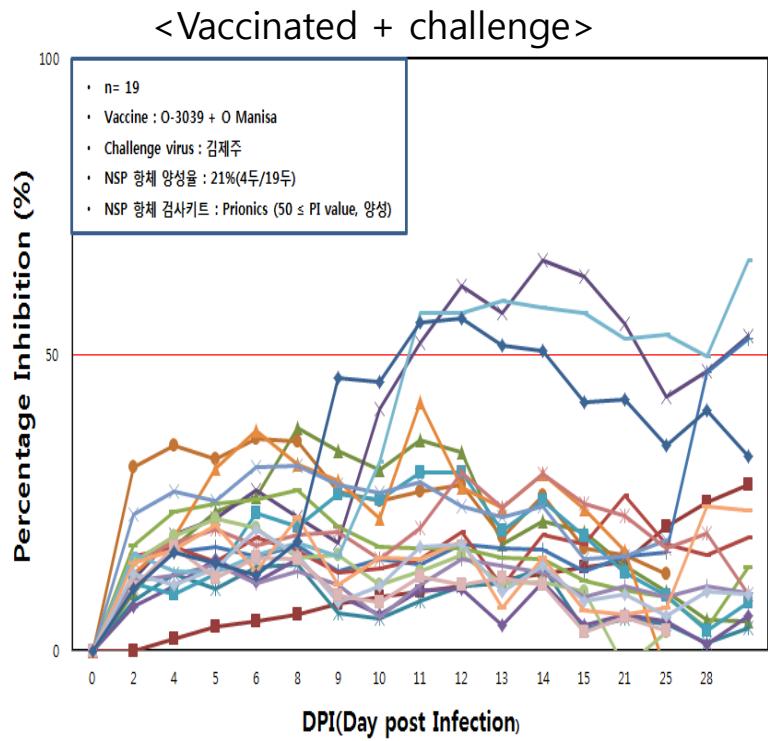

NSP positive-farm pig (LN)

# **Experimental inoculation of recombinant NSP (NSP antibody)**

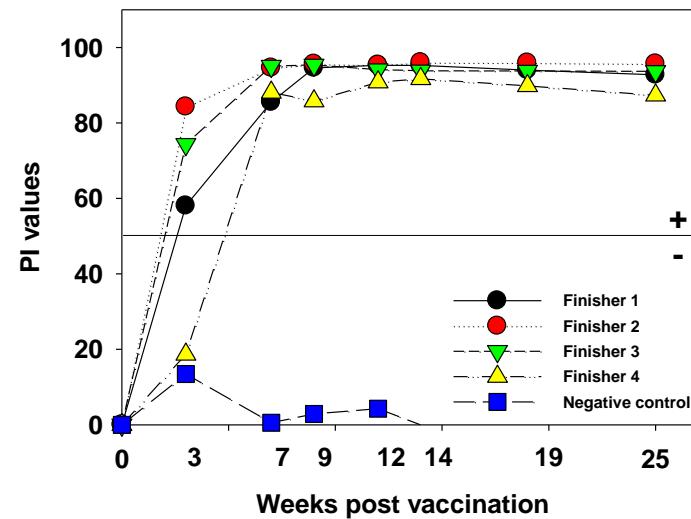

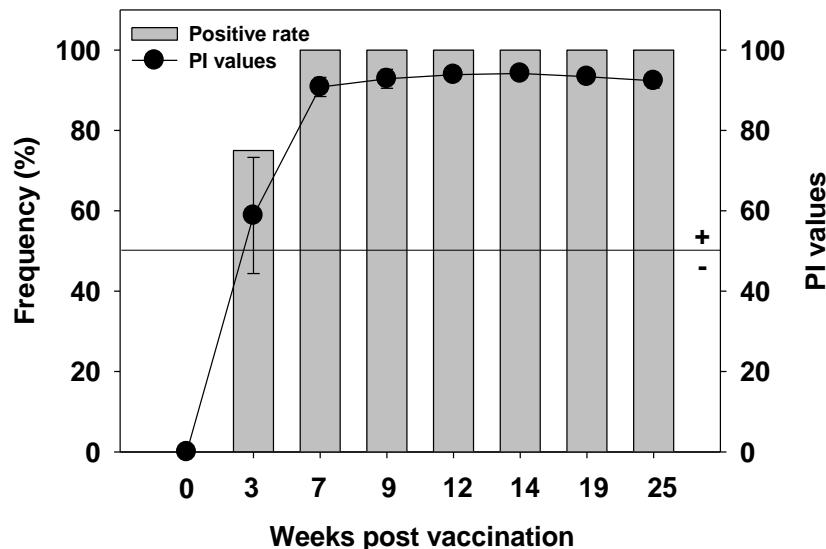

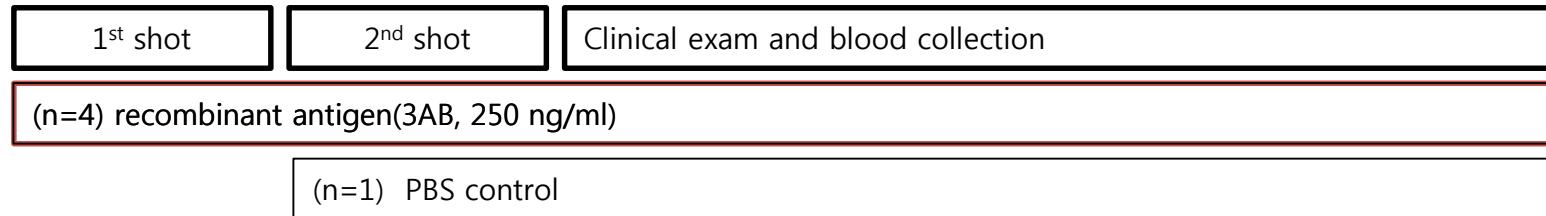

---

**If the NSP antibody is positive, How long persist in the pigs?**

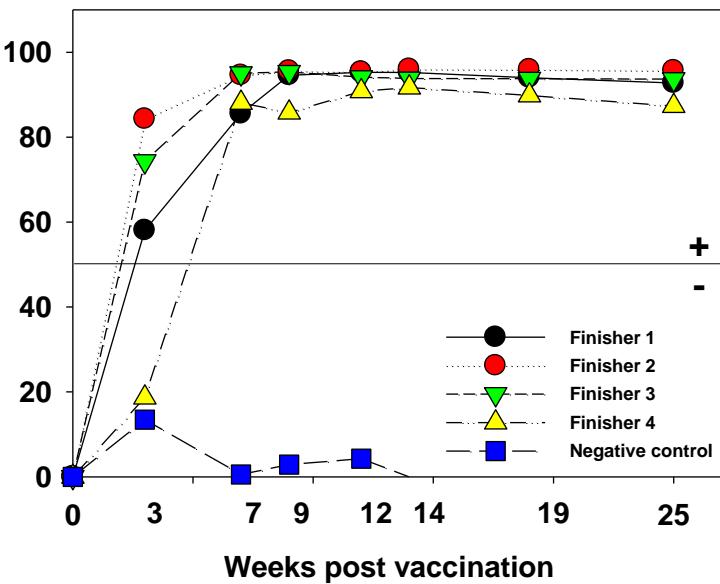

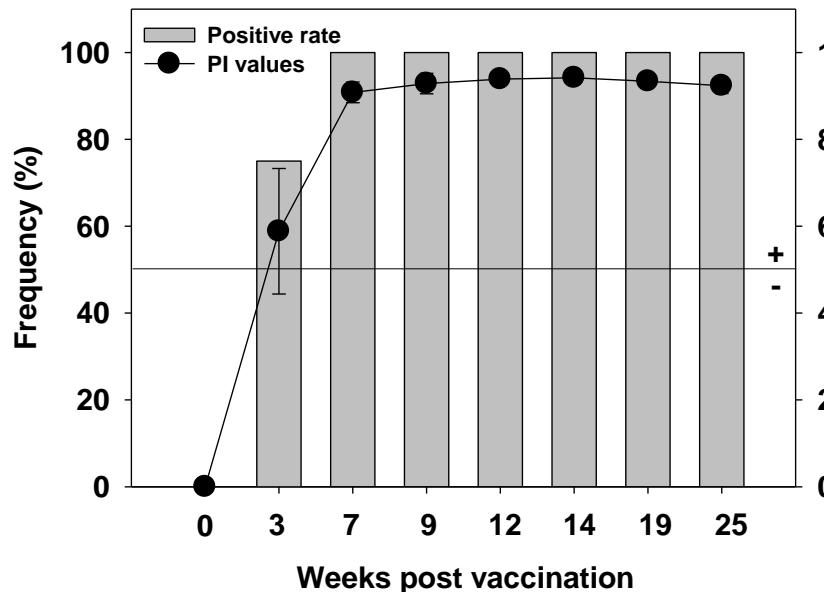

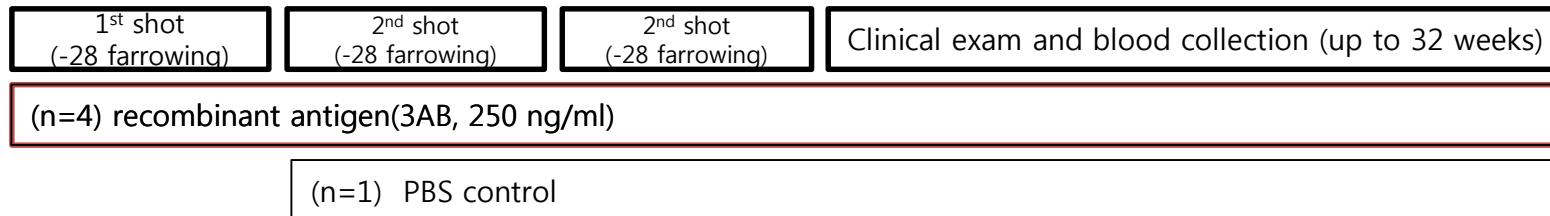

# NSP antibody persistence of the pigs inoculated by wild virus (O, Gimje strain)

# NSP antibody persistence of the finisher pigs inoculated with Recombinant NSP antigen

## NSP antibody persistence of the breeder pigs inoculated with Recombinant NSP antigen

# Conclusion

---

- NSP confirmation method (eg. EITB) need to differentiate the non-specific reactions
- NSP would be lasted for 25 weeks if the NSP is specific one
- Antigen detection of NSP positive farm could rely on transport materials

**THANK YOU**  
**FOR LISTENING**
